

Firestop 101: What Every A&E Professional Should Know

Program Overview:

This course explains the importance of firestop and provides an overview of how the building codes are addressing the issue.

The following objectives will be covered:

- Understand what firestop is and why it's needed
- Know the applicable code requirements related to firestopping
- Understand firestop system testing / listing, and keys to proper installation
- Understand how firestop fits into the specification, design, and construction process
- Installation examples (good and bad)

AIA Information:

Provider – Hilti, Inc.

AIA Course ID – FIRESTOP101

Length – 1 hour

AIA Credits – 1 Health Safety and Welfare (HSW) Learning Unit

Target Audience:

This course is intended for installers, inspectors, and construction specifiers.

How Taught:

The Continuing Education System facilitator utilizes Microsoft Powerpoint, handouts, product samples, and situational examples to provide an in-depth synopsis of design considerations for specifiers when selecting and applying the best performing firestop systems and solutions.

Facilitator Qualifications:

All Firestop 101 presenters are direct manufacturer representatives that work for Hilti
